Pune, Maharashtra, India

Objective

Computer Engineering graduate with hands-on experience building and deploying web applications using Java, Spring Boot, Spring Security, RESTful APIs, PostgreSQL, and React.js. Skilled in developing secure backend services with JWT authentication, designing relational databases, implementing CRUD operations, and integrating frontend applications with REST APIs. Familiar with Hibernate/JPA, JDBC, Flyway, Docker, Git, and cloud deployment platforms. Strong foundation in Object-Oriented Programming, Data Structures and Algorithms, SQL, and software development practices. Seeking a Software Engineer role to contribute to backend and full-stack application development.

Technical Skills

Programming Languages: Java, JavaScript, SQL

Backend Development: Spring Boot, Spring Security, RESTful APIs, JWT Authentication, Hibernate, JPA, JDBC, Maven

Databases: PostgreSQL, MySQL, Relational Database Design, SQL Querying, Query Optimization, Flyway

Frontend Development: React.js, Redux Toolkit, HTML5, CSS3, Tailwind CSS, Bootstrap

Tools & Deployment: Git, GitHub, Docker, Postman, Vercel, Render, Neon, Cloudinary

Core Concepts: Object-Oriented Programming (OOP), Data Structures and Algorithms, SDLC, REST API Design, Authentication and Authorization, CORS, Modular Architecture

Projects

Yojak – Full-Stack Blogging Platform | *Java, Spring Boot, PostgreSQL, React.js*

[Link](#)

- Developed and deployed a full-stack blogging platform using Spring Boot, Spring Security, PostgreSQL, React.js, and Redux Toolkit, supporting user authentication, blog publishing, comments, likes, profiles, and content management.
- Designed a normalized PostgreSQL database schema for users, posts, comments, and likes with primary/foreign key relationships, cascading operations, and Flyway migrations for version-controlled database management.
- Implemented CRUD operations for posts and comments, like functionality, user profile management, and ownership validation to ensure users can modify or delete only their authorized content.
- Built dynamic blog discovery features including Most Recent, Most Liked, and Most Commented filtering using JPA queries and aggregate data, along with Cloudinary integration for profile and post image uploads.
- Built and deployed the application using Docker, Render, Neon PostgreSQL, and Vercel, configuring CORS, environment-based secrets, GitHub-based deployment, and frontend-backend API integration.

Student Management System – Relational Database Design | *MySQL, SQL, DBMS*

- Designed a normalized relational database with 4 interconnected tables – Student, Course, Instructor, and Enrollment – using primary keys, foreign keys, UNIQUE constraints, and CHECK constraints to maintain data integrity.
- Applied 1NF, 2NF, and 3NF normalization principles to reduce data redundancy and established relationships between students, courses, enrollments, and instructors using referential integrity constraints.
- Developed and tested 38 SQL queries using INNER JOIN, LEFT JOIN, GROUP BY, HAVING, ORDER BY, subqueries, aggregate functions, and conditional expressions for data retrieval and analysis.
- Implemented advanced SQL operations including CTEs, window functions with RANK(), nested subqueries, conditional aggregation, and multi-table joins to analyze student performance, course enrollment, grades, and instructor data.

Education

Savitribai Phule Pune University (SPPU)
Bachelor of Engineering – Computer Engineering

Pune, Maharashtra

Certifications

Java Full Stack Development
JSpider

In Progress

- Currently pursuing a Java Full Stack Development certification covering Core Java, advanced Java, and full-stack web development practices.
